

Cellular Antioxidant Protection

Our body's health depends on our cells' health. To slow down aging, limit illness and prevent disease we must protect and feed our cells properly.

Cells are made up of atoms. Healthy atoms have "paired" electrons (yellow dots). When healthy cells replicate they make an exact copy. **FREE RADICALS**, atoms missing an electron, steal electrons from surrounding atoms and they alter or destroy cells. Cells that die and cells that replicate in a damaged state are the cause or contribute to premature aging, sickness and diseases such as cancer, heart disease, osteoporosis, and many others.

Cellular Antioxidant Protection
